

# RCW<sup>+</sup>

Pole mounted vacuum Recloser

Full gas filled protection, with manual closing device

## Quick Operation Instruction

**Best solution for your power!**

# The sternest Warning before you operate recloser!

## Make sure that:

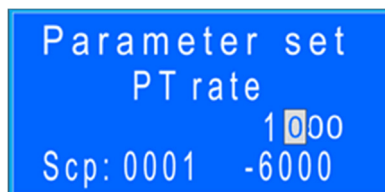

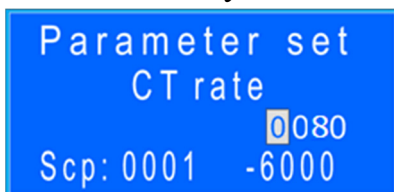

- 1, Please make sure the battery is ready full charged (12 hours), before to operate recloser controller!
- 2, It's not allowed to use emergency opening and closing handle at normal condition!
- 3, It's not allowed to repeat press the Open/Close button continuously without intermission.

## Further Warning!

Special attention should be paid to the following points, which may cause the recloser to fail to work.

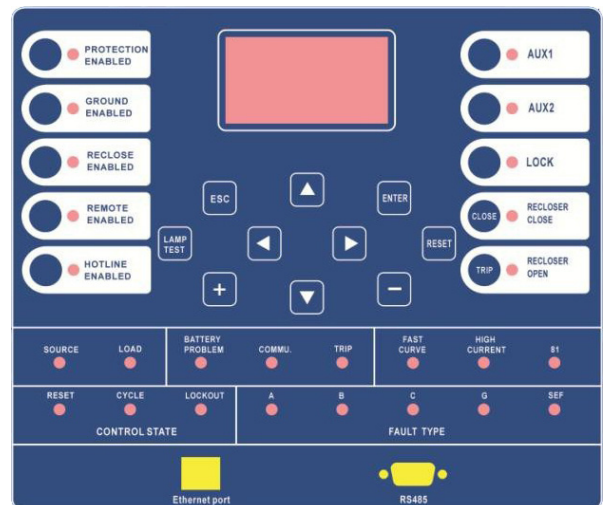

### 1. About Controller parameter setting

- ▲ Do not modify CT rate, PT rate, PTS rate in controller!
- ▲ Do not modify recloser sequence, it is O-0.5s-CO-2s-CO-5s-CO in IEC standard.

### 2. About OPEN/CLOSE operation

- ▲ It's not allowed to repeat press the Open/Close button continuously without intermission.
- ▲ Please contact us in time, frequent operation will burn the controller components

### 3. About manual closing device (Yellow handle)

- ▲ It is not allowed to do manual closing operation if not necessary emergency demand.
- ▲ Make sure the recloser is at OFF position and controller can't drive it into close situation
- ▲ After closing successfully, continue to pull down for 3 times to release the lockout.
- ▲ It is only allowed to be used in special non-electric operation situation.

The above three points are special remarks, do observe strictly.

**Please do not hesitate to contact me if any queries.**
